

O-CITY PROJECT

Erasmus+

Project funded by: **Erasmus+ / Key Action 2 - Cooperation for innovation and the exchange of good practices, Knowledge Alliances.**

1. Lesson Content

Lesson 1 Topic Edition

Particular photo editing and use of digital tools to improve the images obtained

In this lesson, we will learn to analyze and edit the images we have obtained to improve their quality before doing the audiovisual project.

In the third topic, we will learn to edit and assemble the project; but first, we have to learn to edit the photo that will be the main component of the entire video.

What would you correct from the next photo?

- ✓ Think about the rule of thirds and that the object is horizontal
- ✓ Is the photo too dark or light? Is it underexposed or overexposed?

Exactly, we must apply the concepts of composition and technique.

- The sculpture must be placed vertically
- We have to touch up the light of the image

- We must cut the image below

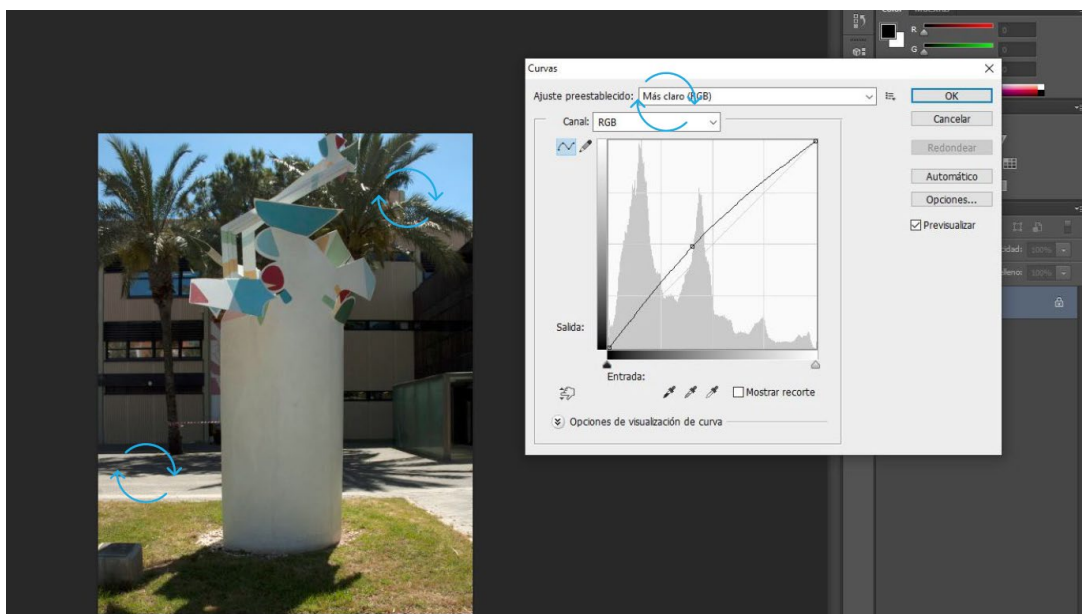

How do we do it?

First of all we are going to work with any editing software. One possibility is the GIMP application, but it can be any other that allows us to work online without having to download the program.

This is the main working panel of the program:

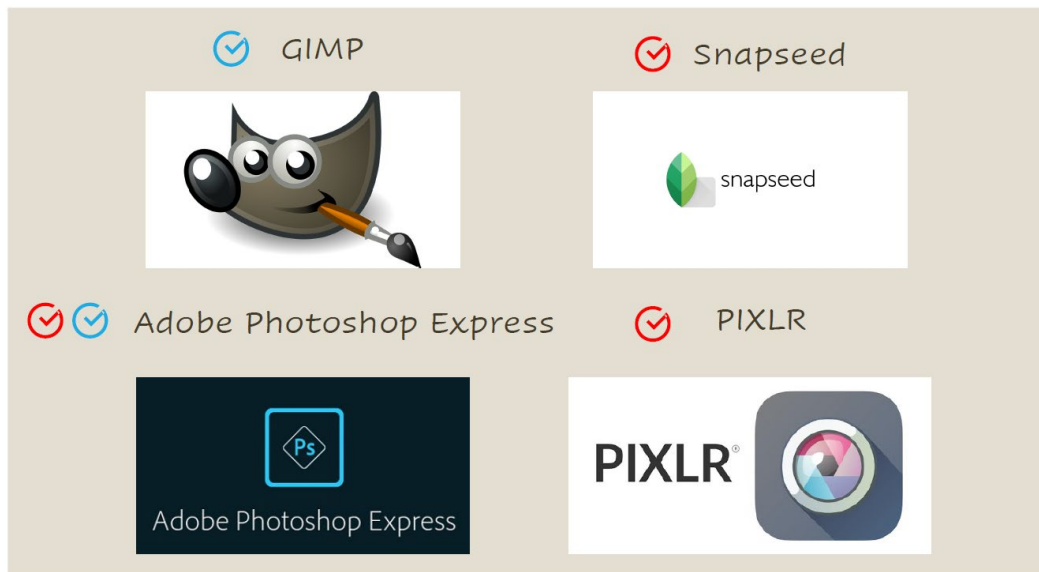

To begin with, on the top left of your screen you can see the option “File”, where is the “Import File” button. Select your photo to edit.

What are the best applications or software to edit images?

There are two types of tools:

- To work online
- To download and install on the computer or mobile phone

Conclusions

The final quality of the photo that we take will be equal to the final quality of the audiovisual project that we propose. It is necessary to communicate the message clearly, both in the photo and in the script.
