Project funded by: **Erasmus+ / Key Action 2 - Cooperation for innovation and the exchange of good practices, Knowledge Alliances.**

## Topic 4 –Edit

### Lesson 2 Export settings

This lesson has been prepared so that those interested in learning about the Edit and specifically the Export Settings acquire the competences with the objective of using the tools in the generation of multimedia content for the O-City project.

Once the lesson is completed and approved, learners will be able to:

1. Know how to Export and different ways of exporting in OpenShot Editing Software

To export your project you have to reach the top left with your mouse and click on the red dot icon.

The most common export selection is MP4(h.264). This one covers every platform and every software that plays videos. Other selections are of course used but you can find a possible error in another software, that's why the MP4(h.264) is our safest option.
